DB-Modul Error - Error while reading next node, Error while fetching next row from resultset

Marcel Menten - menten GmbH - 2017-01-04 - in Probleme

If the following **error** in the DB module occurs:

com.menten.ieffect.mapper.db.DBModuleException: Error while reading next node

or

Error while fetching next row from resultset

it could be, that recently made changes you did on your ibm db2 database, are unknown to the ibm i and i-effect. This is due to the uses of SQLPackages.

To **fix this issue** you need to delete the i-effect SQLPackage:

1. Use WRKOBJ and select 2 with parameter *ALL/*ALL and *SQLPKG
2. At the list, search for and *SQLPKG with some name like: IEFF*
3. Delete the file with Selection 4
4. Restart the EDI-subsystem and try again
